Abbe number can be measured simply!
(In the case of measurement of Abbe number "vd")

- Set the sample on the prism surface.
- Insert the 589nm interference filter (attached to the DR-M2 as a standard accessory). While looking through the eyepiece, match the boundary line with the intersection point of the cross hairs. Then, press the SET key.

- Replace the interference filter with the 486nm interference filter (an optional part). While looking through the eyepiece, match the boundary line with the intersection point of the cross hairs. Then, press the SET key.
- Replace the interference filter with the 656nm interference filter (of an optional part). While looking through the eyepiece, match the boundary line with the intersection point of the cross hairs.
- Press the SET key. The indication on the display at that time represents the Abbe number "vd".

* For optimum convenience, use an optional digital printer to print out the refractive index at each wavelength and Abbe number.
